DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 17-21 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Regarding claim 17, new subject matter, "An article of manufacture including a computer-readable medium having instructions stored thereon that, if executed by a computing device, cause the computing device to perform operations comprising", was not disclosed in the specification, as originally filed. Claims 18-21 are dependent claims and are rejected for the same reasoning.

Allowable Subject Matter

3. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 1 and 15, none of the prior arts of record, in combination or individual, show or make it obvious a method of forwarding a data packet, comprising

the steps of receiving the data packet, generating a link-layer frame, and wherein sending, via the broadcast address, the link-layer frame to a plurality of access devices, wherein at least one access device of the plurality of access devices supports the mobile node, and wherein the broadcast address is configured such that each of the plurality of access devices does not have to join the broadcast address in order to process the link-layer frame. Claims 2-10 are dependent claims and are allowable as indicated by the reasoning as stated above.

Response to Arguments

4. Applicant's arguments filed 05/04/10 have been fully considered but they are not persuasive.

Regarding claim 17-21, the Applicant's stated that, arguments, the Applicant's stated that "Applicants respectfully submit that support for the above references features can be found throughout the application. Specially, the claimed invention is directed to routing data packets to a connection-oriented server. In one embodiment of the invention the data packets that are routed are IP packets. One skilled in the art at the time the present application was filed would recognize that routing IP packets inherently uses processors, memory, and instructions stored on a computer-readable medium. In response to the Applicant, the examiner has thoroughly reviewed the application and found no evidence that the specification has support for the claimed features. Therefore, the rejection is proper.
